

The Diebold
Difference

The Diebold Difference

Anyone can sell you a card reader, answer a customer service hotline or deploy a service technician. But only Diebold can provide you with the resources of a security integrator with a deep understanding of identity management and access solutions and the standards that govern them.

Expertise in FIPS 201

Since the inception of FIPS 201, Diebold has been working with government agencies to develop plans for compliance, as well as strategies for usage. Diebold participates in and is actively involved with the independent organizations that helped shape the evolution of FIPS 201, such as the Smart Card Alliance's Physical Access and Identity Councils and the Security Industry Association.

Security Integration Built on Physical Legacy and Logical Acumen

Diebold is the only security integrator in the world with a history in physical security. In fact, our physical security expertise spans 150 years. Today, we complement that skill set with a deep understanding of logical security tools. Our holistic approach ensures we can deliver security strategies that meet the unique needs of our customers across markets and around the world.

Open-Systems Solutions & Future Proofing

The payment plan for a proprietary system often outlives the system itself. That's why Diebold specs a wide variety of technologies to meet the unique needs of our customers. Our technology recommendations are based on the specific needs of your organization, and they include widely available, open, standards-based systems from some of the world's best technology suppliers. Our third-party review process, engineering, systems design support, integration services, and end-user training ensure that no matter what the technology, it works for you.

Unparalleled Service

Our nationwide service footprint ensures you have access to an experienced service team, whether you're entrusting us with installation and service for a single location or your entire enterprise. Diebold's service professionals provide complete life-cycle support 24/7/365, from application design to installation, preventive maintenance to customer support and beyond.

Let's
talk.

Let's Talk About CredentialOne.
