

CredentialOne

CredentialOne Introduction

A holistic approach to the creation and practical usage of credentials is the best way to ensure the security of your people, facilities and assets. Diebold's CredentialOne delivers just that. An innovative suite of comprehensive identity and access management solutions, CredentialOne is based on a single enrollment process for countless applications and multiple use case scenarios. During the enrollment process, data can be captured in one of three ways:

- 1** From an existing smart card (PIV, CAC, TWIC, FRAC, ACIS) or legacy credential
- 2** An authoritative database or third party Identity Management System (IDMS) to enable usage and provisioning
- 3** By live enrollment/registration; for PIV credentials this requires following the entire FIPS 201 process for credential and electronic identity creation; that is, a fully-compliant FIPS 201 solution. This process begins with sponsorship through registration, vetting and credential creation

From your efforts to achieve FIPS 201 compliance to consideration of options for usage of the credential, Diebold's experts are your security partners who can provide the advice and tools you need to navigate federal requirements and ensure your program provides return on investment and remains relevant. Together, we can build a compliant system and infrastructure that includes forward-thinking processes and components for establishing a unique personal identity, managing credential issuance and usage and securely accessing your facilities and assets.

From the development of your systems approach to the selection of components, from simple PACS provisioning to full implementation to testing and credential issuance, CredentialOne was designed not only to help you achieve compliance, but to increase the efficiency of your agency. Our modular and scalable solutions are based upon open standards, multiple technologies and boundless migration options, giving you the freedom to introduce a system today that can evolve to meet your needs tomorrow. CredentialOne solutions comprise approved products and services built around the Diebold Identity Integration Services Framework. They include:

COMPLIANCE CONSULTATION

Expert advice to guide the development of your security strategy and selection of the tools that will enable your agency's compliance with HSPD-12

ENROLLMENT MODULES

Tools for the capture of personal identification information, including biometrics, biographics and digital certificates

DATA CAPTURE AND PROVISIONING MODULES

Tools that enable the leveraging of information from other systems to identify participants at your agency

IDENTITY MANAGEMENT SYSTEM

Tools and strategies for the centralized and secure storage of participants' biographic and biometric data

CARD PRODUCTION SYSTEMS

Centralized card production systems integration or local/distributed printing solutions

PHYSICAL AND LOGICAL ACCESS CONTROL SYSTEMS

Scalable solutions to enable usage of your credential, including both physical and logical access control systems from single-site deployments to enterprise-wide systems

SNAP-IN MODULES

One or more tools to enable the integration of a variety of system devices, such as biometric capture sensors and document authentication devices

IMPLEMENTATION AND TRAINING

Skilled service professionals who can install and help launch your credentialing solution across your enterprise, locally or nationwide

USAGE CONSULTING

Expert advice to leverage your investment through usage with physical and/or logical access control systems

ON-GOING SERVICE

Total life-cycle service capabilities including depot-level service capabilities and/or dispatch of trained field personnel for on-site system maintenance and repair
