NOTE:
IF A TRANSACTION DRAWER IS REQUIRED, IT MAY BE NECESSARY TO REMOVE THE STRAP ANCHOR LOCATED ABOVE THE DRAWER OPENING. THE STRAP ANCHOR MAY NOT BE REQUIRED, AND IF INSTALLED, MAY INTERFERE WITH THE INSTALLATION OF THE TRANSACTION DRAWER.
PRE-INSTALLATION GUIDELINES:

All windows must be installed in a properly-sized opening. All brick, sill, grouting, and washing must be complete before the window is anchored in the window frame. Review the following statements.

Windows are designed to be installed following the installation of the exterior facing brick.

Grout from the brick installation can seriously degrade the aluminum finish and can pit the glass and lead to premature breakage.

The cleaning solution used to wash the brick can etch the aluminum finish.

Even if the window is protected, installing the facing brick after the window is installed may not leave the required minimum perimeter caulk joint between the window and exterior substrate. As a result, this may prevent a water tight joint due to normal building movement.

The strap anchors are designed for wind load. Under certain conditions, the cantilevered dead load condition that may occur if the bricking is installed after the window can over-stress the anchors. This may cause racking of the frame, which results in difficult window operation.
